

BACKGROUND OF THE INVENTION

[0005] This present invention relates generally to ice-skating and more particularly, toward a modified ice-skate intended for the use of coping and/or striking other surfaces while ice skating.

[0006] The act of using ones own skate(s) to cope and/or strike other surfaces, is commonly practiced in in-line skating. Hitherto and to the best of my knowledge, such technology and compatibility does not exist in the public domain or in prior art. Also, to the best of my knowledge, such technology and compatibility is not applied to ice skating or any ice skating sport thereof.

[0007] Therefore, it is the object of invention to employ the technology and functionality of coping and/or striking other surfaces to an ice skate.
